OBJECTIVE

Graduated Software Engineering student specializing in Backend Development. Experienced in building scalable microservices, AI-powered systems, and high-performance APIs using C#, gRPC, and modern backend frameworks.

EDUCATION

Bachelor of Information Technology in FPT University ***2022 – 2026***

- Current GPA: 3.15 / 4.0
- Relevant Coursework: Data Structures, Database Systems, Software Engineering, Object-Oriented Programming

TECHNICAL SKILLS

Programming:	C#, Java, ASP.NET Core, React, TypeScript
Backend & APIs:	WPF, Razor Pages, Blazor Pages, RTSP, gRPC, SignalR, RESTful API Design
Database:	MSSQL, SQLite, PostgreSQL, MySQL, Redis, MongoDB
Infrastructure:	Docker, Nginx, Git, Postman, xUnit, Github, Gitlab
Architecture:	Microservices, Monolithic, Clean Architecture, N-Layer
Tools, IDE, MCP:	Visual Studio, Visual Studio Code, Rider IDEA, Cursor, Antigravity, Claude Code, Draw.io, Jira, Taiga

EXPERIENCE

Company:	FPT Software
Position:	Intern Developer
Duration:	12/2024 – 05/2025
Project:	**CLAIM REQUEST — Overtime Management System (Internal Project)** Internal system that allows employees to submit overtime requests, managers to approve them, and integration with timekeeping and payroll systems. **Responsibilities:** Architecture design; Backend development (.NET); Frontend development (React + Vite + TypeScript).

PROJECTS

Scan2Order Platform - Capstone Project

Tech: ASP.NET Core, React, TypeScript, React Native, Azure, CI/CD, Supabase, JWT, VPS, N8N Automation, Docker | 2026 | **Organization** | **Backend** | **Frontend for Customers** | **Frontend for Tenant** | **Website for Customers** | **Website for Tenants** | **Mobile App for Staffs**

- Developed a scalable full-stack SAAS platform for streamlining tenant management and order processing using QR codes.
- Developed an efficient QR code scanning feature for quick each restaurant lookup and order placement.
- Using VPS for hosting and deployment via Docker & Github Actions.
- Integrated Redis for caching OTPs, cart items, menu, transaction dishes logic management.
- Developed an external API integration from n8n automated workflows for scanning tax number information.
- Implemented SignalR for real-time communication between clients and the server (e.g., live notifications, order updates, shifts transfer).
- Implemented a robust Rate Limiting mechanism using ASP.NET Core middleware to mitigate Brute Force and DoS attacks; applied strict limits (50–100 req/min) for sensitive endpoints like Auth and Order.

FitnessCal - Experiential Entrepreneurship Project

Tech: ASP.NET Core, React, TypeScript, React Native, Azure, CI/CD, Vercel, O2Auth, Supabase, MongoDB, Resend | 2025 | **Backend** | **Frontend** | **Website** | **Mobile App**

Achievement: Grade 9.5/10 | **Certificate**

- Designed and implemented a full-stack application for managing fitness routines and nutritional tracking.
- Implemented O2Auth authentication and JWT token management for secure user sessions.
- Developed background services/worker services for handling payment processing, daily meal logging, and failed transaction cleanup and meal notifications.
- Calculates nutritional data based on user-uploaded food imagery via Gemini AI.
- Integrated Azure Web services for scalable backend infrastructure and Github Actions for CI/CD pipeline automation.
- Integrated PayOS, Sepay Webhooks for automated, real-time transaction processing and order fulfillment.
- Leveraged MongoDB to architect a flexible schema for storing multi-turn chat histories between users and the AI
