Summary

Computer Science student at HCMUT focused on applied AI, backend automation, and reliable workflow systems.
Built projects that convert unstructured inputs into structured outputs through retrieval, evaluation, and user-facing analysis.
Interested in AI assistants, document-aware applications, and practical automation tools for business workflows.

Education

Ho Chi Minh University of Technology (HCMUT) 2023 – Present

Bachelor of Computer Science GPA: 3.8/4.0 | IELTS 8.0 | Chinese HSK 3

Technical Skills

AI Engineering	LangGraph, LangChain, RAG, Embeddings, ChromaDB, OCR, NLI
Programming	Python, C++, Java, JavaScript, TypeScript basics
Backend & APIs	FastAPI, Flask, ExpressJS, Node.js basics, REST APIs, Async Workflows
Data & Databases	MySQL, MongoDB, Pandas, NumPy, Data Cleaning
ML & Modeling	PyTorch, LSTM, Time-Series Forecasting, Model Evaluation
Systems & Tools	Git, Docker, Linux fundamentals, HTTP/TCP, CI/CD, Ollama

Projects

Deposition Contradiction Detection System Jun 2026

Full-Stack / Applied AI Project

Tech Stack: React, TypeScript, FastAPI, Python, Embeddings, NLI

- Built a FastAPI + React AI contradiction detector that compares witness depositions using LLM claim extraction and cross-encoder NLI scoring with deberta-v3-base, supporting Ollama, Anthropic, OpenAI, and DeepSeek through one provider interface.
- Reduced LLM calls by 6× by batching all Q/A blocks per deposition into one structured prompt and running both transcripts concurrently, reducing analysis time by over 80%.
- Replaced 200+ lines of WordNet and keyword heuristics with LLM-based claim classification across 8 relation families, improving generalization across new transcript pairs.

Backend AI Workflow System Jun 2025 – Jul 2025

Backend / Applied AI Project

Tech Stack: Python, LangGraph, LangChain, ChromaDB, Docker, Ollama

- LangGraph stateful agent with ChromaDB long-term memory — cross-session episodic recall via LLM-generated reflections, with multi-model orchestration (Ollama, Gemini, Perplexity) routed per task.
- ReAct agent with 7 tools: vision OCR on images/scanned PDFs, Vietnamese translation, Tavily web search, vector DB retrieval — paired with a Gradio UI supporting multi-modal (image + PDF) input.

Vietnam IT Job Market Analytics Jun 2026

Data Engineering / Analytics Project

Tech Stack: Python, Playwright, Pandas, SQLite, Streamlit

- Crawled approximately 6,000 IT job postings from byox.vn using Playwright, CDN API requests, checkpoint recovery, and rate-limited pagination, parsing 13 fields including title, company, salary, skills, location, experience level, work model, and URL.
- Cleaned and enriched raw job data with Pandas by normalizing 50+ city/location variants, extracting salary ranges from unstructured text, classifying work models, and mapping skills through a 103-entry normalization dictionary.
- Built a SQL analytics layer and interactive Streamlit dashboard covering market overview, skill demand, salary insights, location distribution, and work-model breakdown for Vietnam IT job trends.

Soft Skills

- **Problem Solving**
- **Teamwork**
- **Self Learning**
- **Work Under Pressure**
- **Adaptability**
